

Your customers already ask their own assistants. Can your product answer?

The trigger comes from outside: your customers no longer want to operate your product, they want to hand it to their assistants. **I open your core product via MCP, along the tasks your users actually perform, with authorization in each person's own context.**

THE OFFER

The MCP Layer for Your Product

From task design to a running layer: your core product becomes usable by your customers' assistants, without breaking your permission boundaries.

WHAT I BUILD

- Task design: nine tools instead of two hundred endpoints
- Authorization in the signed-in user's own context
- MCP standard, spoken by your customers' assistants
- Self-documenting: new functions, no client changes
- Every call logged, including on whose behalf
- Optional product knowledge (RAG) as a lookup source

WHAT YOU RECEIVE

- A running layer on your product, acceptance-tested
- Architecture blueprint with the tool design
- Authorization and governance concept
- Assessment of feasibility, effort and scaling path

WHY SMARTER SYSTEMS

Not another chatbot inside your product. Your product becomes the tool your customers' assistants can operate.

- **Built, not claimed.** Built at Survalyzer as CTO, naming approved.
- **The task design is the value.** Two hundred endpoints became nine tasks.
- **Authorization per user.** No tenant key that bypasses your permission boundaries.
- **Hands-on principal.** You work directly with me, no junior hidden on the team.

HOW WE START

01

Architecture Workshop

Two sessions · from CHF 3'500

Tool design, authorization model, running sketch.

02

Blueprint & Proof of Concept

4 to 6 weeks · from CHF 30'000

The layer on your product, running and accepted.

RECOMMENDED

03

Productionization & Operation

as needed

Hardening, more use cases, scaling.

Free 30-minute architecture call

We look at your product and what an agent layer for it would look like, no strings attached. How you proceed is your call.
